Guest: I think that Donald Trump has a lot of reason to take credit for this action. There is no crisis of people coming in at the border. What we are seeing here is the Obama administration arming itself against Republican or right-wing attacks. The problem is, is that it's building this suit of armor out of the souls of these women and children who sought protection here. And what they found instead was detention, police state, borderline tyranny - in some respects, the exact same treatment that they were fleeing from.

Host: I guess someone might hear tyranny and a comparison made between the United States and some of the countries that these families are coming from and might push back on you there a little bit.

Guest: You know what, his Spanish was very, very good, and he said a lot of things that got everybody in the crowd excited, and it was just a great way to begin this convention, at a Latino rally, the first official welcoming as the governor. And he did great, and the crowd was energized.

Host: He is certainly courting the minority vote. He has done well with the Hispanics in his home state. But beyond speaking Spanish and holding the rallies, what is he saying specifically that you think is drawing in Hispanics?

Guest: Well, I started first the obvious question, what does fatherhood mean? You would be surprised hearing the different answers of what it means to be a father to different men. Generation-wise, people of an older generation, what it means to be the role - the father figure. What that means is different than with the younger generation today.

Host: And so, OK, you said what does being a father mean. What else did you ask?

Guest: Well, the way the President added the numbers up to get 300, that's kind of what Wall Street economists do. And so if you think about it, we thought that we had a lot fewer jobs in the months of the past, and they revised them up. And that's why the market went up so much. And I've got to say the economists who follow it closely at the White House and me and on Wall Street, we really did breathe a sigh of relief because there's been a lot of other data that's not nearly this good. But to have that strong a job market, it really bodes well for the economy going forward because people have jobs, people see their wages going up and so on. And that's generally pretty good for the outlook.

Host: So - it's good news. But for your average American-

Guest: Well, it makes it very difficult, Bill, but remember, these are opening hours of diplomacy. We have to lay diplomacy before military action, and we've got to be in accordance with the U.N. and the rule - and the rule of law. So all of those grounds are being laid. But Crown Prince Abdullah is well respected in the Arab community, and reportedly he is going to make a proposal at the Arab Council later this month basically to have Israel withdraw to its pre-1967 war borders, in exchange for recognition by the Arab nations and a guarantee of its sovereignty. That is an old proposal, nothing new, been rejected before, but perhaps these new times make it a good idea again, because where we are going is leading to disaster for both sides, Bill.

Host: Listen, you mentioned the early stages of diplomacy. Do you have a crystal ball here that you can look into and say, eventually, with a pretty good road map, this conflict or potential for conflict with Baghdad may go this way or that way or this way?

Guest: You couldn't even mention the word pregnant. And, you know, it was a national event when this baby was born. In fact, it was "TV Guide's" first cover, was her real child, Desi. So thank you both for that. But then, "Murphy Brown" - of course you move ahead a few years - and here's a single mom having a baby, with, you know, after a fling with her ex-husband. And it wasn't a national event, it was a national debate about how appropriate this was.

Host: Because the vice president, Dan Quayle, came out and criticized "Murphy Brown," criticized the, well, the character of the show. Thinking that you are just going to encourage all these single girls to go ahead and get pregnant.

Guest: Well, you know, in any company, in any 100-year-old company, I kind of liken it to a person. You're going to build up some cholesterol in the veins, some blockages. And what we're trying to do is kind of unclog those blockages.

Host: Give us an example. What's in this restructuring plan? And Ford did restructure just four years ago. What's in this plan that would do what just what you're saying, unclog the artery?

3 / 3 annotators highlight a paraphrase

Guest: No, I don't. And I'll tell you, as a matter of fact, I think one of the things that a breakup would do is it would get Microsoft's people to focus more and more on making a better PC. I mean, here we have these PCs, they've been around for, you know, a couple decades. They still don't work. I mean, PCs should work as well as your washing machine does, and as reliably.

Host: Yes, can you imagine if you had to reboot your washing machine as much as you did your PC. You'd be pretty upset, wouldn't you?

0 / 4 annotators highlight a paraphrase

Guest: ... there was a skilled supervisor there. Now, I think the parents to put it mildly made a error in judgment in allowing this girl to do this. But, I mean, how you could have a society that allows a nine-year-old to shoot an UZI is just unbelievable.

Host: I mean, under a federal law, no one under 18 can possess a weapon like this. But if it's - if you're with a guardian, you can be instructed.

3 / 3 annotators highlight a paraphrase

Guest: Well, the first step is really our ability to implant electrodes and report directly from the brain cells in an area known as the hippocampus. This is an area that's responsible for forming memories in rats and in humans. And what we were able to do was to record the activity of these brain cells as an animal ran on a simple circular maze. And when the animal ran on this maze, there were unique patterns of brain activity that allowed to us tell what the animal was doing: where it was, how fast it was running. And what was intriguing was that when we went and looked at this brain activity while the animal was sleeping, we found that these patterns were replayed and that literally minutes of the animal's past experience was reexpressed during a particular stage of sleep, and that is rapid eye movement sleep, or REM sleep.

Host: So they were doing the maze for work, and then they were dreaming, and so like us, they were dreaming about work as well.
